share of the gap closed by terms with published inputs (%)
Zeeman noise below the Ramsey band
exchange noise below the Ramsey band
qubit frequencies moved by the gate voltage
coherent residual measured by GST
upper bound (fed back during run)
not closed by published inputs
(b) noise slower than the Ramsey average
(c) pulse distortion, single-pole low-pass
(d) qubit frequency moved by the gate
added error / gap
time without recalibration (h)
bandwidth of the exchange line (MHz)
$df/d\ln J$ of one qubit (MHz)
adds error
removes error (absolute value)
at the published or derived input (Xue, Tanttu)
